- ▶ Safe for cystic acne
- ▶ Eliminates the need for oral medication
- ▶ Improves uneven skin tone

ACNE0711

Common Problems that Affect 85% of all Teenagers

Acne is the term for plugged pores (blackheads and whiteheads), pimples, and deeper cysts or nodules that occur on the face, neck, chest, shoulders, and even on the back and arms.

STEP 1 ▶
Application of a topical photo-enhancer.

STEP 2 ▶
Using a laser, the area will be lightly heated causing stimulation of skin cells.

STEP 3 ▶
The laser will then be used to create a peeling effect to remove the topical photo-enhancer. This will clean away the skin surface and clogged pores, which will reduce oil production and pore size.

“EVER SINCE I’VE HAD MY ACNE LASER PEEL ALL OF MY ACNE HAS CLEARED UP.”

HOW CAN THE ACNE LASER PEEL CONTROL MY ACNE?

The three-step laser treatment process uses a special wavelength, combined with a lotion, to control the inflammation of acne, reduce sebum production, and induce skin cell turnover.

HOW MANY TREATMENTS ARE REQUIRED?

At the first treatment session, all acne lesions will begin to reduce in size. Several more treatments will be needed with 2-3 week intervals. New acne counts are dramatically reduced.

HOW LONG WILL CLINICAL RESULTS LAST?

While laser treatments are considered to be long lasting, they are not permanent. For maintaining clinical results and improving your skin’s condition, follow-up treatments are recommended every 3 months.

HOW MUCH IMPROVEMENT CAN I EXPECT?

You will see improvement after the first treatment, but results are more dramatic after 3 or 4 treatments.

HOW DO OTHER TREATMENTS COMPARE TO THE ACNE LASER PEEL?

Unlike other procedures, the Acne Laser Peel is virtually pain-free with no downtime. The treatment offers a greater margin of safety than topical or oral medications and has predictable and consistent results.

Better results with no downtime.

Nodular and cystic lesions begin to reduce in size after just one session. It is also a very good treatment for sebum reduction to control future acne outbreaks.
