## Pigmentation

### THE PROCEDURE

An FDA approved LASER passed over the pigmented area will target the pigment and break it up below the surface. As the skin sloughs, so does the pigment, leaving beautiful, more evenly toned skin.

### THE RESULTS

Initially the pigmented area may become slightly darker with a light pink or gray tinge. After the initial darkness, tone begins to improve. After 1-2 weeks the area will lighten or disappear in the sloughing process. Three to six treatments, spaced 3-4 weeks apart are generally needed to achieve an even tone.

### THE PAIN

A topical numbing medicine may be applied to ease the pain and an antihistamine is offered to reduce swelling. This generally controls the discomfort and renders the treatment pain-free. Oral pain relievers and anti-anxiety medications are available if needed.

### THE COST

Pigmentation treatments are priced according to the area or number of spots to be treated. A full face treatment is \$400. Treatment of individual spots start at \$100 per treatment. Price for other areas of the body are available upon request and range from \$200-\$500 per treatment.

### RISKS

#### COMMON

- Swelling
- Temporary Darkening of Pigment

#### LESS COMMON

- Hypopigmentation (lightening)
- Hyperpigmentation (darkening)
- Blister/Burn
- Scar
- Infection

BEFORE

*This 32 year old female has blotchy uneven pigment throughout her face.*

*Four LASER treatments, every three weeks, has done a lot to even out this client's skin tone.*

AFTER

BEFORE

*This 45 year old female was wearing very dark make-up to cover her freckles, which made her look older.*

*Following three LASER treatments, the freckles are greatly reduced and she has a more youthful appearance.*
