

## *Stretch Marks*

*Everyone has always said that little can be done for stretch marks, but Body Perfect begs to differ. Body Perfect offers revolutionary new LASER treatments for stretch marks.*

### *What is a stretch mark/scar and how does the treatment work?*

A stretch mark may consist of uneven pigment, loose scar-like tissue, and an uneven surface. We at Body Perfect use three types of LASERs to address these problems. The first LASER is used to break up and destroy the uneven pigment. The second LASER is used to stimulate the collagen thus promoting tightening. The third LASER is used to smooth the surface for a more even look and feel.

### *Does the treatment hurt?*

At Body Perfect, we use a topical anesthetic applied to the area approximately 15 minutes prior to treatment, this reduces pain and makes the procedure very tolerable.

### *How long does the process take?*

The actual procedure varies on the size and location of the stretch marks. The process is done in 6-12 treatments spaced 2-6 weeks apart.

### *What are the risks and or side effects? (See Possible Risk of LASER hand-out)*

Most commonly clients may experience a sensation similar to that of a sunburn.

### *What are the benefits?*

- More even color and tone
- Skin looks and feels smoother and firmer
- Increased confidence

### *What are alternative treatments?*

- Topical creams
- Tummy tucks
- Massage

### *Questions:*

This procedure has been explained to you in this hand-out and by Body Perfect professional. If you have any questions about this procedure, you may call Body Perfect at 888-843-2039.
