Under Eye Dyschromia

THE PROCEDURE

The Laser light seals off superficial vessels and lightens the pigmentation.

THE RESULTS

After at least 4 treatments spaced 4 weeks apart the darkness under the eye is lightened resulting in a person looking less stressed, tired, and old.

THE PAIN

A topical numbing medicine may be applied to ease the pain and an antihistamine is offered to reduce swelling. This generally controls the discomfort and renders the treatment pain-free. Oral pain relievers and anti-anxiety medications are available if needed.

THE COST

This treatment is priced at \$150 per treatment.
